Installation

Ref: https://docs.aws.amazon.com/es_es/cli/latest/userguide/cli-chap-welcome.html

Function	Command
Install awscli	<code>pip3 install awscli --upgrade --user</code>
Configuring awscli	<code>aws configure</code>

EC2

EC2-UTIL: List all instances

```
aws ec2 describe-instances
```

EC2-UTIL: List specific fields of all instances

```
aws ec2 describe-instances \  
  --query "Reservations[].Instances[].[InstanceId, PublicIpAddress, Tags[?Key=='Name']][0].Value]"  
...  
##### EC2-UTIL: List all instances of a product
```

```
aws ec2 describe-instances \ --filter "Name=tag:Name,Values=latch*" \ --query "Reservations[].Instances[].[InstanceId, PublicIpAddress, Tags[?Key=='Name']][0].Value]"  
...  
##### EC2-UTIL: List all stopped instances
```

EC2-UTIL: List all stopped instances

```
aws ec2 describe-instances \  
  --filters Name=instance-state-name,Values=stopped  
  ...  
  
#### EC2-UTIL: List all stopped instances with ElasticIP
```

```
aws ec2 describe-instances \ --query "Reservations[.Instances].PublicIpAddress" \ --filters Name=instance-state-name,Values=stopped ""
```

EC2-UTIL: List all snapshots in the date specified

```
aws ec2 describe-snapshots \  
  --filters Name=start-time,Values=2019-01-05*  
  ...  
  
#### EC2-SEC: List all snapshots without encryption
```

```
aws ec2 describe-snapshots \ --filters "Name=encrypted,Values=false"
```

```
#### EC2-SEC: List SecurityGroups with SSH open to Internet
```

```
aws ec2 describe-security-groups \ --filters Name=ip-permission.from-port,Values=22 Name=ip-permission.to-port,Values=22 Name=ip-  
permission.cidr,Values=0.0.0.0/0' \ --query 'SecurityGroups[*].{Name:GroupName}' \ --output table
```

```
---  
  
## IAM  
  
#### IAM-UTIL: List certificates
```

```
aws iam list-server-certificates
```

```
#### IAM-UTIL: List policies
```

```
aws iam list-policies
```

```
#### IAM-UTIL: List policies attached to a group
```

```
aws iam list-attached-group-policies \ --group-name ec2-Users
```

```
#### IAM-UTIL: List users of a group
```

```
aws iam get-group \ --group-name ec2-users \ --query "Users[]"
```

```
#### IAM-UTIL: List groups of a user
```

```
aws iam list-groups-for-user \ --user-name aws-admin2
```

```
#### IAM-SEC: Access Keys Rotation
```

```
aws iam list-access-keys \ --user-name aws-admin2 \ --query 'AccessKeyMetadata[?Status=="Active"].[CreateDate]'
```

```
#### IAM-SEC: User with MFA enabled
```

```
if [[ $(aws iam list-mfa-devices --user-name root --output text) ]]; then echo "MFA Enabled"; else echo "MFA Disabled";fi
```

```
---
```

```
## S3
```

```
#### S3-UTIL: List buckets
```

```
aws s3 ls
```

```
#### S3-UTIL: List bucket objects
```

```
aws s3api list-objects \ --bucket pre-cdo-web-resources \ --query 'Contents[].{Key: Key, Size: Size}' \ --output text
```

```
#### S3-SEC: Bucket with public READ access
```

```
aws s3api list-buckets \ --query 'Buckets[*].[Name]' \ --output text | xargs -l {} bash -c 'if [[ $(aws s3api get-bucket-acl --bucket {} --query ""Grants[?Grantee.URI== http://acs.amazonaws.com/groups/global/AllUsers && Permission== READ]"" --output text) ]]; then echo {} ; fi'
```

```
#### S3-SEC: Bucket with public WRITE access
```

```
aws s3api list-buckets \ --query 'Buckets[*].[Name]' \ --output text | xargs -l {} bash -c 'if [[ $(aws s3api get-bucket-acl --bucket {} --query ""Grants[?Grantee.URI== http://acs.amazonaws.com/groups/global/AllUsers && Permission== WRITE]"" --output text) ]]; then echo {} ; fi'
```

```
#### S3-SEC: Bucket with public FULL_CONTROL access
```

```
aws s3api list-buckets \ --query 'Buckets[*].[Name]' \ --output text | xargs -l {} bash -c 'if [[ $(aws s3api get-bucket-acl --bucket {} --query ""Grants[?Grantee.URI== http://acs.amazonaws.com/groups/global/AllUsers && Permission== READ]"" --output text) ]]; then echo {} ; fi'
```

```
---
```

```
## RDS
```

```
#### RDS-UTIL: List databases
```

```
aws rds describe-db-instances \ --query 'DBInstances[].DBInstanceIdentifier'
```

```
#### RDS-SEC: List Databases without DeletionProtection enabled
```

```
aws rds describe-db-instances \ --query 'DBInstances[].[DBInstanceIdentifier]' \ --output text | xargs -l {} bash -c 'if [[ $(aws rds describe-db-instances --db-instance-identifier {} --query ""DBInstances[].DeletionProtection"" --output text) == False ]]; then echo {} ; fi'
```

```
#### RDS-SEC: List Public Databases
```

```
aws rds describe-db-instances \ --query 'DBInstances[?PubliclyAccessible=="true"].[DBInstanceIdentifier,Endpoint.Address]' ``
```
