

DIGITAL FORENSICS & INCIDENT RESPONSE

## REMnux Usage Tips for Malware Analysis on Linux

This cheat sheet outlines some of the commands and tools for analyzing malware using the REMnux

### Get Started with REMnux

Get REMnux as a [virtual appliance](#), install the distro on a [dedicated system](#), or add it to an [existing one](#).

Review REMnux documentation at [docs.remnux.org](https://docs.remnux.org).

[Keep your system up to date](#) by periodically running “remnux upgrade” and “remnux update”.

Become familiar with REMnux malware analysis tools available as [Docker images](#).

Know default logon credentials: remnux/malware

### Operate Your REMnux System

|                        |                          |
|------------------------|--------------------------|
| Shut down the system   | <code>shutdown</code>    |
| Reboot the system      | <code>reboot</code>      |
| Switch to a root shell | <code>sudo -s</code>     |
| Renew DHCP lease       | <code>renew-dhcp</code>  |
| See current IP address | <code>myip</code>        |
| Edit a text file       | <code>code file</code>   |
| View an image file     | <code>feh file</code>    |
| Start web server       | <code>httpd start</code> |
| Start SSH server       | <code>sshd start</code>  |

### Analyze Windows Executables

Static Properties: [manalyze](#), [peframe](#), [pefile](#), [pyew](#), [exiftool](#), [clamscan](#), [pescan](#), [portex](#), [bearcommander](#)

Strings and Deobfuscation: [pestr](#), [bbcraack](#), [brxor.py](#), [base64dump](#), [xorsearch](#), [flarestrings](#), [floss](#), [cyberchef](#)

Code Emulation: [binee](#), [capa](#), [vivbin](#)

Disassemble/Decompile: [ghidra](#), [cutter](#), [objdump](#), [r2](#)

Unpacking: [bytehist](#), [de4dot](#), [upx](#)

### Reverse-Engineer Linux Binaries

Static Properties: [trid](#), [exiftool](#), [pyew](#), [readelf.py](#)

Disassemble/Decompile: [ghidra](#), [cutter](#), [objdump](#), [r2](#)

Debugging: [edb](#), [gdb](#)

Behavior Analysis: [ltrace](#), [strace](#), [frida](#), [sysdig](#), [unhide](#)

### Investigate Other Forms of Malicious Code

Android: [apktool](#), [droidlysis3.py](#), [androgui.py](#), [baksmali](#), [dex2jar](#)

Java: [cfr](#), [procyon](#), [jad](#), [jd-gui](#), [idx\\_parser.py](#)

Python: [pyinstxtractor.py](#), [pycdc](#)

JavaScript: [js](#), [js-file](#), [objects.js](#), [box-js](#)

Shellcode: [shellcode2exe.bat](#), [scdbg](#), [xorsearch](#)

PowerShell: [pwsh](#), [base64dump](#)

Flash: [swfdump](#), [flare](#), [flasm](#), [swf\\_mastah.py](#), [xxxswf](#)

### Examine Suspicious Documents

Microsoft Office Files: [ymonkey](#), [pcodedmp](#), [olevba](#), [xlmddeobfuscator](#), [oledump.py](#), [msoffice-crypt](#), [ssview](#)

RTF Files: [rtfobj](#), [rtfdump](#)

Email Messages: [emldump](#), [msgconvert](#)

PDF Files: [pdftid](#), [pdfparser](#), [pdfextract](#), [pdfdecrypt](#), [peepdf](#), [pdftk](#), [pdfresurrect](#), [qpdf](#), [pdfobjflow](#)

General: [base64dump](#), [tesseract](#), [exiftool](#)

### Explore Network Interactions

Monitoring: [burpsuite](#), [networkminer](#), [polarproxy](#), [mitmproxy](#), [wireshark](#), [tshark](#), [ngrep](#), [tcpextract](#), [tcpick](#)

Connecting: [thug](#), [nc](#), [tor](#), [wget](#), [curl](#), [irc](#), [ssh](#)

Services: [fakedns](#), [fakemail](#), [accept-all-ips](#), [nc](#), [httpd](#), [inetsim](#), [fakenet](#), [sshd](#), [myip](#)

### Gather and Analyze Data

Network: [Automater.py](#), [shodan](#), [ipwhois\\_cli.py](#), [pdnstool](#)

Hashes: [malwoverview.py](#), [nsrlookup](#), [Automater.py](#), [vt](#), [virustotal-search.py](#)

Files: [yara](#), [scalpel](#), [bulk\\_extractor](#), [ioc\\_writer](#)

Other: [dexray](#), [viper](#), [time-decode.py](#)

### Other Analysis Tasks

Memory Forensics: [vol.py](#), [vol3](#), [linux\\_mem\\_diff.py](#), [aeskeyfind](#), [rsaakefind](#), [bulk\\_extractor](#)

File Editing: [wxHexEditor](#), [scite](#), [code](#), [xpdf](#), [convert](#)

File Extraction: [7z](#), [unzip](#), [unrar](#), [cabextract](#)

### Use Docker Containers for Analysis

[Thug](#) Honeyclient: `remnux/thug`

[JSDetox](#) JavaScript Analysis: `remnux/jsdetox`

[Recall](#) Memory Forensics: `remnux/recall`

[RetDec](#) Decompiler: `remnux/retdec`

[Radare2](#) Reversing Framework: `remnux/radare2`

REMnux in a Container: `remnux/remnux-distro`

### Interact with Docker Images

|  |  |
|--|--|
| List local images                              | <code>docker images</code>                           |
| Update local image                             | <code>docker pull image</code>                       |
| Delete local image                             | <code>docker rmi imageid</code>                      |
| Delete unused resources                        | <code>docker system prune</code>                     |
| Open a shell inside a transient container      | <code>docker run --rm -it image bash</code>          |
| Map a local TCP port 80 to container's port 80 | <code>docker run --rm -it -p 80:80 image bash</code> |
| Map your current directory into container      | <code>docker run --rm -it -v .:dir image bash</code> |
